

COMBY 9000

Cleaning and sanitizing work can be incredibly enhanced with the use of steam, which - in addition - guarantees considerable savings on the consumption of water and detergents.

COMBY 9000 is a three-phase steam generator ideal for industrial use, with a robust stainless-steel body. The machine is equipped with a "suction" function. Such technology, called Dry-Master, allows the operator to vacuum and dry-up perfectly the surface treated with steam. In addition, the machine's exclusive Infini-Vac system offers the possibility to adjust the suction power to obtain an even better cleaning result. The boiler has a capacity of 4,2 liters, which develops 10 bar of pressure thanks to three heating elements of 9000 W in total. Note that the three heating elements can be easily removed, to simplify their eventual servicing (Easy-Service system). Additionally, the boiler is equipped with the exclusive Non-Stop System technology, which facilitates the continuous supply of water within the same. Thanks to our exclusive Dose-Master technology (from 1 to 32 levels), the electronic management of the "steam / detergent" mixture allows you to mix the ideal quantity of solution with steam, thus avoiding any waste. In addition, the exclusive Hydro-Jet system enhances cleaning by generating flows of wet steam, thus facilitate the rinsing of the surfaces being treated. Our exclusive Flow-Master technology makes it very easy to manage steam and allows to decrease or increase its flow according to real needs. Comby 9000, moreover, is a very safe product: our Intelli-Boiler system automatically turns off the machine in case of emergency. Comby 9000 allows you to clean very effectively thanks to a series of advantages ranging from reduced consumption of water and detergents (the latter practically eliminated), to thorough hygiene of any treated surfaces. In fact, thanks to the heat generated by the steam, it is possible to dissolve even the most stubborn dirt deposited on any surface. Furthermore, this model can be equipped with the exclusive Hydro-Power technology (optional), which enables the connection of the Comby 9000 to the water mains, for long-term work.

TECHNICAL FEATURES

Model	COMBY 9000	Temperature Max	185 °C
Power Supply	400V	Steam Production	288 g/min
Max Power	10400 W	Refill Tank	15 L
Boiler Power	9000 W	Detergent Tank	5 L
Boiler Capacity	4,2 L	Vacuum Power	1400 W
Pressure	10 BAR	Body	STAINLESS STEEL
