

REVIVE 9000

Cleaning and sanitizing work can be incredibly enhanced with the use of steam, which - in addition - guarantees considerable savings on the consumption of water and detergents.

REVIVE 9000 is the new three-phase "steam & suction" machine (for the removal of dirt performed by steam extraction) designed by STI for the cleaning, disinfection and sanitization of cars / means of transport / ambulances / boats etc.

Dirt is removed through three actions: thermal (steam temperature), chemical (vegetable detergent) and mechanical (steam jet pressure).

Unlike many traditional systems (example: by means of a carpet extractor) which are unable to rinse off the detergent being used, our machine removes it completely by means of the steam generated by the same.

In addition, traditional systems use the detergent pump at full capacity most of the time, which consequently wets a lot. On the contrary, REVIVE 9000 allows you to adjust the wet steam-flow (Wet-Master technology), with the advantage of leaving the fabric dry and totally detergent-free.

Thanks to its stainless steel structure, REVIVE 9000 is the ideal machine for the most demanding cleaning jobs, offering, in addition to the possibility of disinfecting and sanitizing the passenger compartment, also the ability to clean the car body.

TECHNICAL FEATURES

Model	REVIVE 9000	Temperature Max	185 °C
Power Supply	400V	Steam Production	288 g/min
Max Power	10400 W	Refill Tank	15 L
Boiler Power	9000 W	Detergent Tank	15 L
Boiler Capacity	4,2 L	Vacuum Power	1400 W
Pressure	10 BAR	Body	STAINLESS STEEL
